

RiskLens — Network Risk Report

Generated September 13, 2026 | AWS-framed multi-VPC network | 35 resources analyzed

863 / 1000

OVERALL NETWORK RISK SCORE (higher = safer)

Top Priority Resources — Fix First

Resource	Type	VPC	Risk Score	Trend	Monthly Cost	High Risk + Cost
res-002	LoadBalancer	Shared-Services	100.0	rising	\$209.57	YES
res-007	Lambda	Production	62.5	rising	\$61.54	-
res-015	S3	Staging	60.7	rising	\$105.48	-
res-023	S3	Shared-Services	22.5	flat	\$47.12	-
res-013	EC2	Shared-Services	16.7	flat	\$225.33	YES
res-016	RDS	Staging	15.7	flat	\$297.42	YES

Remediation Impact — Worked Example

Fixing the top-priority resource (**res-002** — resolving its admin-level IAM role, disabled encryption, missing MFA, and public exposure) raises the overall network score from **863** to **891**, a gain of **+28 points**. This demonstrates the model's scoring is actionable: fixes measurably move the number.

Cost & Risk Correlation

4 resources were flagged as both high-risk and high-cost — these represent the clearest cases where remediation reduces exposure and the resource's own operating cost burden is not currently justified relative to its risk profile.
